PROBLEM FIT SOLUTION:

Customer Segment:

Elderly People
Physically Challenged person
Working people

Customer Constraints:

Budget , no cash,
network connections,
power , available devices.

Available Solution:

Today's life is full of responsibilities and stress. In this system is fully call based alert application. The patient take the medicine at the respective time through this caretaker save our time.

Jobs-To-Be

Done/Problems:

Some people find it difficult to learn new apps in this ever -expanding digital environment and people now a days tend to forget things more easily, such as taking their prescriptions.

Problem Root Cause:

In the busy environment elderly and working people can't see the message. So we are include call based application in this system.

Behaviour:

The right time which focus on ensuring the correct timing frequency and duration of the prescribed order and documenting accurately medication administration time

Triggers:

Its specially designed for old age patients who suffer from disease.

Emotions: Before/After

Insecure- Confident , in control -Use it in your call based alert application

Your Solution:

Medication reminders serves as a good way to stay on track an uphold an appropriate schedule.

Channel of Behaviour:

Sometime patients forget to take the medicine at the required time of medicines and it is difficult for Doctor/ compounder to monitor patients around the clock.so we are introducing android based application in which an automatic call system is implemented.
